Hybrid

Made from Pile: 85% Wool, 15% Polyamide, Ground: 100% Cotton in 15 colourways

# The best of both

This perfectly refined textile expertly incorporates the aesthetics of a flat woven fabric with the durability of a moquette, and is destined to transform transport interiors with its contemporary look. The double density all loop face is designed to withstand the demands of today's transport world with its high performance capabilities and enhanced strength. Wire woven using wool, Hybrid is robust and lightweight, with sustainable credentials.

## Perfectly woven

Produced on a wire loom, the construction of Hybrid has been expertly designed, woven and finished to provide a tactile, three-dimensional finish. Bringing added depth and texture, the all loop surface is tightly woven to create a unique upholstery appearance, whilst its lighter weight makes Hybrid the perfect accompaniment for the sleekest of transport interiors.

## Highly durable

Developed to be installed in the most demanding environments, Hybrid has been crafted with performance at its core. With an uncut finish, it is a textile to help disguise any potential stains – ensuring it will retain its tastefully refined appearance on even the most well-travelled seat.

## Sustainably sourced

With a wool rich composition, Hybrid is a sustainable textile. One of our greatest natural resources, this renewable fibre is highly durable, supremely technical, ultra-intelligent, and can even enhance the air quality of transport interiors with its ability to absorb harmful gases. With an ever-increasing need to embrace sustainability in each element of our lives, Hybrid marks the future of transport textiles.

## At a glance

- A wire woven wool textile
- Combines the aesthetics of a flat woven fabric with the durability of a plush moquette
- Double density all loop face provides enhanced strength
- Robust and lightweight, with sustainable credentials
- Meets Reg 118.02 and EN45545 with FR treatment
