X2 is a Camira Circular fabric which pushes the boundaries in textile-to-textile recycling and addresses the global textile waste problem.

Originally launched in 2012, X2 was our first 100% recycled fabric to include closed loop post-industrial content from our own textile waste streams such as yarn remnants and selvages. These were returned to our yarn supplier to be thermo-mechanically recycled, then mixed with post-consumer content from PET bottles to form the black base yarn which gives the fabric its distinctive melange effect.

In 2024, we have significantly increased the percentage of textile waste, so that this not only includes our own manufacturing process waste, but also includes pre- and post-consumer used textiles from the clothing and sports apparel industries. The new X2 now contains 25% textile-to-textile recycled polyester, along with 75% post-consumer recycled polyester from plastic bottles, and sports a reinvigorated colour palette for today's hybrid world.

## Trash to trailblazer

Less than 1% of textiles worldwide are recycled into new products, and every seven minutes a stack of clothing, the size of Mount Everest, is sent to landfill. Using these discarded and worn out textiles from the apparel industry, as well as yarn and fabric from our own waste streams, we have pioneered the latest X2 to make an even bigger material difference, reducing our carbon footprint and illustrating the infinite opportunities of textile waste as a valuable resource. So the new X2 is textile-to-textile, bottle to textile, trash to trailblazer.

## For the modern world

Comprising 33 dynamic colourways with 14 new shades, X2 is designed for hybrid spaces including commercial, hospitality and residential interiors.

Suitable for seating, panels, curtains and drapery, X2 provides stretch, flammability and abrasion performance. The fabric's new colour palette embraces warm berry tones, cool blues, mauves, and turquoises, as well as subtle earthy shades, providing a colour scheme for every interior.

The black base yarn in X2, composed of textile to textile waste, creates a textured grey mélange effect, reminiscent of a high-end wool, adding surface appeal and dimension.

## At a glance

- **The original closed loop recycled polyester just got better**
- **25% textile-to-textile waste, 75% post-consumer recycled polyester**
- **Making a positive environmental impact – addressing the textile waste mountain**
- **33 dynamic colourways informed by the latest colour insights**
- **Suitable for hybrid, commercial and residential spaces**
- **High performance, multi-application**
- **Certified to the EU Ecolabel, Oekotex Standard 100, and Indoor Advantage Gold**
