ReSKU 2.0 is a recreation of our iconic recycled wool fabric, ReSKU, which launched in 1998 and was made from old army jumpers. Reimagined for 2024, to celebrate our 50th anniversary, ReSKU 2.0 is the latest innovation to emerge from our advanced textile reprocessing technology, iinouiiio.

Recycled, renewable and circular

An intelligent blend of recycled wool, generated from our own manufacturing waste, and harvested flax, ReSKU 2.0 demonstrates the limitless potential of textile waste as a valuable resource. A pioneering, future-forward fabric with a rich history, ReSKU 2.0 is recycled, renewable and circular.

Colour, recreated

With a naturally homespun aesthetic, accentuated by its hopsack weave, ReSKU 2.0 is created using recycled woollen fibres which are sorted into colour groups before being mechanically pulled apart, shredded, and stripped back into fibre form. Coloured flax is then added to the recipe to achieve 24 charming colourways.

It is never over until it is over

Developed at our manufacturing sites in Huddersfield, Yorkshire, ReSKU 2.0 brings a new lease of life to wool, enabling a cherished natural fibre to be enjoyed anew, in hospitality, commercial and residential settings.

ReSKU 2.0's stunning shades co-ordinate and complement many of our other ranges, including Main Line Flax, Main Line Twist and Blazer. This fabric is suitable for upholstery, as well as curtains and drapes.

At a glance

- A blend of recycled wool and renewable flax
- 24 distinctive colourways
- A multi-application fabric
- Manufactured using our own yarn waste
- Developed at our sites in Yorkshire, in the UK
- Meets key flammability and performance standards
