Nesta

Made from 66% Post-Consumer Recycled Polyester, 33% Textile-to-Textile Recycled Polyester, 1% Polyester, in 27 colourways

Created for Calm

camira

www.camirafabrics.com

Consciously crafted from recycled raw materials, including textile-to-textile waste and used plastic bottles, Nesta embodies circular innovation. Its warm, indulgent wool-bouclé-like texture adds tactile richness to modern interiors, creating a soft, inviting surface that enhances comfort and wellbeing.

Colours Rooted in Nature

Comprising 27 harmonious colourways, Nesta reflects the instinctive comfort of nesting and the restorative qualities of sheltered spaces. Inspired by the materials nature gathers for protection and refuge, gentle tonal shades echo weathered leaves, feathers, moss and dried grasses, while deeper hues draw on the richness of bark, hedgerow and woodland berries.

Expanding upward, the palette also captures the shifting canopy of the open sky. Soft, airy tones evoke the gentle clarity of early morning mist and the crisp coolness of winter dawn, while deeper notes of slate blue and twilight indigo ground rooms in calm, quiet stillness.

The resulting palette feels balanced and reassuring, wrapping interiors in warmth, depth and a sense of belonging.

Softness with substance

Offering the look and feel of wool, Nesta is 99% recycled polyester fabric designed for both softness and performance. Its delicate texture and piece-dyed finish create richness and consistency, while delivering excellent seam slippage and dimensional stability.

Designed for living

Suitable for task seating, soft seating, curtains and drapery, Nesta is made for spaces that prioritise ease and relaxation. With a cosy, hospitality-inspired aesthetic, it brings a sense of sanctuary to both commercial and residential interiors.

The colourway naming story continues this sense of refuge, from Warren and Den to Rest and Dwell, each one evoking protection, comfort and belonging.

Consciously crafted

Made from recycled raw materials, including textile-to-textile waste and used plastic bottles, Nesta embodies circular thinking. Its mono-composite construction means it is recyclable at the end of its life, aligning with forward-looking design principles and a more responsible approach to material usage.

At a glance

- **Recycled polyester fabric with a wool-bouclé-like appearance**
- **Made from recycled raw materials, including textile waste and used plastic bottles**
- **Mono-composite construction for recyclability**
- **Warm, soft handle with enhanced tactility**
