Patternmaker

Made from 100% Virgin Wool, in 4 designs

Pattern and personality

Using state-of-the-art digital print technology and created in collaboration with renowned textile designer, Kate Lawrie, Patternmaker's four contemporary designs, Crosshatch, Dot Dash, Hula and Speckle, are brought to life on our pure new wool felted fabric base.

A key collaboration

With over 25 years of experience in textile design, Kate Lawrie's designs are inspired by geometric and terrazzo patterns, as well as hand-painted artistry. Combining contemporary printed design with classic woven fabrics, the collection comprises four colour palettes including cool-toned grey-blues, warm honey-browns, rich earthy terracotta shades and restorative green and blue hues.

The new collection is a celebration of both innovative printed design and classic woven fabrics and naturally complements Camira's other ranges, sitting beautifully beside boucle wool textile, 'Yoredale' and felted wool fabric, 'Blazer'.

Soft and earthy tones

Emulating a unique, hand-painted, artisan aesthetic, Patternmaker's four designs work as stand-alone pieces or in unison, to bring chic and sophisticated style to a space. The gentle, soft and earthy tones used in this collection are reminiscent of the natural world and inject subtle style and personality into hospitality, commercial and residential settings. Carefully curated for multiple applications, this collection is suitable for upholstery, soft furnishings and curtains and drapery.

Printing pattern

The digital printing process used to create Patternmaker has been perfected for wool and wool blend fabrics, offering unrestricted colour and pattern capabilities. Engineered and optimised to penetrate woven natural fibres, Patternmaker is the result of significant research and development and is created at our manufacturing facility in Yorkshire, in the UK.

Sustainability and style

Made from premium New Zealand lambswool, Patternmaker's felted wool fabric base is natural and renewable, and certified to the EU Ecolabel and Indoor Advantage Gold. The digital print process itself is an environmentally intelligent option for adding colour to a fabric which typically involves lower water and energy consumption compared to traditional dyeing. Due to smaller batch production, there is also the added benefit of reduced waste thanks to no over-production.
