Created with a conscience, in partnership with the SEAQUAL® INITIATIVE to combat marine plastic pollution, Quest is a lightly textured fabric for transport interiors, woven entirely from post-consumer recycled plastic.

## Driven by design and performance

Quest is 42% lighter than traditional plush wool transport fabrics, yet delivers exceptional durability—exceeding 100,000 Martindale abrasion cycles.

It incorporates Camira's patent-pending Eco FR™ technology, a halogen-free, lightweight flame-retardant backing that forms a protective char to resist ignition - ensuring safety, strength, and a more sustainable solution for transport interiors.

## Taking back to give back

Contributing to reducing marine plastic pollution in a tangible way, each metre of Quest contains the equivalent of 23 plastic bottles. The SEAQUAL® INITIATIVE is a global community dedicated to transforming marine plastic into new, high-quality products. Camira's partnership supports initiatives in Tunisia's Kerkennah Islands and along the Nile River in Egypt, where local collectors are paid fairly to retrieve and process plastic waste, generating jobs and enabling real social and environmental change.

## Designed for modern transport interiors

Simple in its aesthetic, Quest has been impeccably coloured to create a subtle two-tone weave detail, bringing a subtle touch of the ocean's natural beauty to transport interiors. Capturing the depth and breadth of the seasonal shorescape, each of the 21 colourways have been as carefully considered. From the sparkling blue of a summer's sea and fresh green of springtime flora to the golden ochre of an autumn sun's rays and cold grey of a winter's beachside cliff, the Quest shade selection is filled with evocative, authentic colour.

## At a glance

- Woven entirely from recycled plastic waste, taken from both land and sea
- High performing featuring Camira's Eco FR™ technology
- Includes 75% SEAQUAL® yarn
- Available in 21 colourways
- Subtle, two-tone weave detail
